## Enhanced Availability and Performance Monitoring Insight for IBM Z

**Palo Alto, CA, August 9, 2018** – Applied Expert Systems, Inc (AES), the business cloud service management company, is pleased to announce the managed availability of **CleverView® for TCP/IP v9.2** and **CLEVER Mobile® for z/COMM**. The industry's most comprehensive z/OS-based TCP/IP availability and performance monitor expands its insight into the z/OS environment with new dashboard and improved graphics functions. As new technologies impact the IBM Z, the rapid pace of change makes availability and performance management a necessity to keep Service Level Objectives and Service Level Agreements on target.

In the world of User Interface design several elements are critical to a successful design: clarity, familiarity, responsiveness, consistency, and effectiveness. While CleverView for TCP/IP championed the mainframe browser interface for service management tools in the 1990's, it has continued to involve as an early adopter of Mobile access in 2013. Today AES continues evolving the interface with a new **Dashboard** and improved graphics. Clarity is the most important element of user interface design. The new **Dashboard** and graphics communicate more meaning and function in a concise and familiar manor. The ability to 'drill-down' is an effective way to provide details without presenting a cluttered screen. With alert details a user becomes more effective due to quick access to information regarding the alert.

This enhancement, along with its existing robust network performance and availability monitoring features:

- **SysPoint Dashboard** presents summarized metrics for monitored z/OS systems in a graphical format.
- **LinkView** shows the traffic and status of channel-attached processors and allows easy execution of start/stop commands.
- **EE Expert** reports on EE connections.
- **Connect Expert** shows real-time application session activity for TCP and UDP.
- **Event Manager** captures z/OS system-wide messages with filtering and alerting.
- **StackView Monitoring** provides historical metrics allowing trending analysis for each monitored address space.
- **BatchPR** allows automatic report creation.
- **SessionLog** displays business application session traffic, round trip time, and CICS transaction details.
- **RTTMon** provides details and alerts on the Round Trip Time (RTT) for any TCP/IP transaction.
- **PORTMmon** produces alerts and details on TCP/IP applications and protocol.
- **FTP Server Intrusion Detection** strengthens z/OS security for File Transfer Program (FTP) with online FTP session logon failure in real-time and through historical reports.

make **CleverView for TCP/IP** and **CLEVER Mobile for z/COMM** the ultimate choice for z/OS performance and availability management.

For detailed information on **CleverView for TCP/IP**, **CLEVER Mobile for z/COMM** and other CLEVER® Solutions from AES, please visit [www.aesclever.com](http://www.aesclever.com) or email: [marketing@aesclever.com](mailto:marketing@aesclever.com).

**CleverView for TCP/IP v9.2** is now in managed availability.
